# International

## The new generation.

2020 / 2021

What started as a local brand in Haiku, Hawaii, has today grown into an international team of people and places, all contributing to the aspects of the brand. With the core of our product development firmly rooted in Hawaii, hubs on the Mainland and in Europe have been added to the mix. We now have a Goya Windsurfing sail design center in Hood River, Oregon, our product and graphic design is being created in Hamburg, Germany, and our European headquarters are located in Tarifa, Spain, with factories encompassing Thailand, China, Italy and the USA. On top of it all, Francisco is spending part of his year in Barcelona, Spain, getting a great deal of European sailing under his belt.

Everyone involved with developing, producing and representing our brand, is passionate about riding, and when you get in touch with them, you will notice how each one of us comes from another part of the world, different languages, different cultures, yet united in the inclusive fabric of our team, always inviting you to feel at home.

So why the international expansion, and what does it all mean for you?

You see, there's a reason why Marcilio Browne has started riding production boards and sails for competitions such as Pozo, Tenerife and Sylt, and ending up PWA Vice World Champion in Waves on them. Just like there is a reason why Kai Lenny, despite riding Red Bull custom colors, chooses the same exact production sails you can pick up at any of our dealers. It proves that the level of these Goya Windsurfing products, available off the shelf, has become ultimately advanced, and tailored to working, and winning if you fancy, all over the planet, not just a specific spot or wind direction.

The new generation of Goya Windsurfing products is the result of that combined international effort, as well as...

**Lifetimes of Windsurfing Dedication.**

# Sustain Ability.

# Response Ability.

# By Francisco.

This is a magical sport, a liquid surface holds you, an invisible energy moves you, and the culture and fabric of its community is driven by the passion we all feel towards it. Ecological awareness is a responsibility we all need to embrace in every decision we are making today.

There are many little things we can do that are better for our environment. And so we do them.

At Goya Windsurfing the longevity of our products is our starting point, a light and strong board that is built right, shipped once, and can be passed on for years to come.

Bio resin is the next step and we have been using it in our boards for a number of years.

Recycled paper packaging is a reality with our boards. When you receive one, there is just that, the board, the paper wrap, the cardboard box.

Many bigger steps need to be taken still, biodegradable foam, compostable layup materials, water based print, paper based stickers, and as each technology advances, we embrace it. The goal must be to create a board that can be left to compost, or fed back into our sport's cycle.

# Vertical waters.

## Where the Custom 4 Pro is at home.

This is it. The latest and greatest evolution from our two wave world champions Marcilio Browne and Francisco Goya. The Custom 4 Pro is the ultimate pro model wave board, straight from their board bag to yours, a custom performance board put into production. Carrying the MB initials for a reason, these are the exact same boards Brawzinhio chooses to ride in Pozo, Tenerife and Sylt, during the PWA World Cup.

Marcilio by John on Sylt, and by Paul on Maui

Its DNA is beautifully Hawaiian. So wherever the waters are vertical, this Quad will perform to sensationally. These all new shapes slightly grew in width at the mid section and received a bit more area for the back foot while maintaining their lengths. The profile has been thinned, compared to the last generation. Although the rockers share the same overall curve from the previous model, the all new Custom 4 Pro line incorporates a more defined surfboard rocker, with a lower entry and higher tail. This shift in the rocker allows them to better fit into the curve of the waves while still maintaining early planning and carry speed into the turns. The bottom features a slightly shallower double concave, making the board fast and direct.

## Make no mistake, these are all new shapes.

Inspired by the Goya Youth development, a new 60 liter model has been added along with the rest of the all new line. We felt we had to make our favorite boards available to the growing youth. This new size includes a narrower stance and further back mast track position to better balance the lighter/smaller advanced and professional riders.

A nice feature update comes with the double inserts for the back strap, eliminating strap twisting, period.

If you are interested in taking your wave sailing to radical new heights, this board is for you. Your search is over.

# Custom 4 **PRO**

Surfwave Quad

# Custom 3 PRO

Surfwave Thruster

Marcilio by Paul

**The new Custom 3 Pro,  
more lively and fun all  
around, through new  
progressive rockers,**

**parallel outlines and  
refined bottom shapes.**

All new shapes make this board much more agile and surfy, while balanced volume displacement delivers even a bit more power and control through the tail.

Now featuring a lower entry and a higher tail rocker, this minus/plus rocker shift gives the boards better early planing and more natural projection off the turns. The tail and nose outline points were slightly moved out to introduce more of the parallel outline concept, delivering easy rail to rail high end performance. The new thinner profiles increase power and comfort while improving the board balance and range of use. Pairing a thruster fin set-up with a V/Double concave bottom shape and a parallel

outline, the Custom 3 Pro unifies the classic three fin combo with a modern progressive wave shape. Double inserts on the back strap virtually eliminate strap twisting. Marcilio enjoys riding the Thruster on smaller or onshore waves, describing the feeling as refreshing and fun, which is why the Custom 3 Pro carries his Pro model MB initials. The Custom 3 Pro is designed for the wave oriented rider, a middle ground indeed between our Custom 4 Pro and One 3 Pro.

# Goya Youth.

PWA Youth Wave World Champion  
Marino Gil Gherardi rides the Custom 3 Pro.

Marino by Paul.  
On Custom 3 Pro and Fringe X Pro.

Goya Windsurfing boards are born in our custom factory right in the heart of Haiku, Hawaii, and the Custom 3 Pro is no exception. When the new production boards finally arrive in the shop for the new season, it's like a full circle, brethren returning to the cradle. For an instant. Ready to be sent out the world. To you.

Custom 3 Pro 86 by Bjoern

# PRO Carbon & S-Glass Construction

Custom 4 Pro, Custom 3 Pro, One 3 Pro, Air Pro

## Biaxial Carbon

Ultra Light & Ultra Strong  
Full Stance Monocoque

Extensive patches of biaxial carbon connect the peak loads of your feet to the rest of the deck, evenly distributing the forces resulting from jumping and wavering.

## HYPER SKIN HD

Technology

**High Density Sandwich**  
Hyper Light & Hyper Strong  
360° Board Coverage

Hyper Skin HD is our proprietary closed cell sandwich, delivering an immensely rigid structure at an extremely light weight. Covering deck, rails and bottom in it, gives our Pro boards their incomparable flex and longevity. A third stronger, stiffer and lighter than conventional boards.

## FUSED CELL CORE

Technology

**EPS**  
Super Light & Super Strong  
Core

Fused Cell Expanded Polystyrene is a high quality, low weight, rigid, closed cell foam used in advanced modern production boardmaking.

## S-Glass

Super Light & Super Strong  
Rail Bands

Protecting the rails of your board on the water and on land.

## Wood

Very Light & Super Strong  
Heel Shocks

Generous patches of biaxial glass reinforced wood sandwich shock absorbers under your heels.

## Dual Density Pads

Soft lower, firm upper layer,  
for comfort and longevity

## Biaxial Glass

Very Light & Super Strong  
Direct Flex Monocoque™

The Direct Flex Monocoque connects your stance to the masttrack and distributes peak loads to the rest of the board, allowing for our boards to be both lighter and more rigid than traditional wave board constructions.

## Unidirectional Carbon

Ultra Light & Ultra Strong  
Core Axis Reinforcement

This long and wide carbon patch acts as a superior backbone, making you board stiffer and eliminating distortions.

## Triple Glass

Very Light & Very Strong  
Nose Impact Protection

Keeping the nose of your board safe from harm, yet light.

## FULL S GLASS HULL

PRO

Technology

## S-Glass

Super Light & Super Strong  
360° Board Coverage

S-Glass provides higher strength and elasticity compared to standard glass, while maintaining more flex than carbon. Flex is a super important secret to an outstanding Wave board. A full Carbon Wave board would be too stiff to deliver the agility required by radical modern wavesailing. We use a highest quality full S-Glass hull in combination with a full Carbon stance monocoque.

# One

**The all new One 3 Pro has evolved into a progressive Freewave board, with parallel outlines, drawing from modern surfboards, while maintaining the overarching concept of being one board for Wave, Freestyle and Freeride.**

Francisco by Ben.

The new outlines improve agility and comfort on longer, choppy runs, while the resulting added tail area improves stability, early planing and comfort. All sizes now come with a swallow tail. A slightly lower entry rocker allows the board to naturally glide into a plane. The volume in the new One 3 Pro is more equally distributed along the board's profile and all new shape, to create a more stable and evenly planing hull with more flotation around the standing area. Incorporating a shallower V and double concave into its bottom shape increases acceleration and planing surface.

All sizes are now available with Mini Tuttle side fins and Power Box center fin, for their lightness, simplicity of use, and effective compatibility with larger fins sizes.

Strategy. Hydrofoil Tensile Engineering.

FOIL READY

Marcilio by Paul and Ben by Ludovic

## Version three of the Proton Pro has an incredible wind range at super high speed.

The rockers have been substantially reworked, with a slightly lower entry rocker, improving planing and top speed significantly.

The outlines have gotten more parallel, meaning a wider tail for more power and a more comfortable stance as well as a slightly wider nose that gives a bit more lift and early planing. The deck has also been closely re-examined and gotten flatter, so when you are gybing the boards are more stable. The deck around the footsteps

has been made more comfortable so you can ride for longer and push harder. The all new bottom shapes have been reworked with quite a lot more V and V-Concave through the entire board, giving it more power and easier railing possibilities, plus extra control. The double step cutouts are still very generous, but occupy slightly less area, less area meaning less resistance and therefore more speed, while the wider outline delivers the lift needed in lighter winds.

Specific size constructions for every size deliver a customized build, with full carbon fibres running in specialized directions. As the boards get bigger, the carbon construction gets stiffer. Developed in Spain and Hawaii by Ben van der Steen and our Goya Racing Team.

Proton 137 by Bjoern

FOIL READY

# PRO Full Carbon Hull Construction

Proton Pro

## Unidirectional Carbon

Ultra Light & Ultra Strong  
Core Axis Reinforcements

These long and wide carbon patches act as superior backbones, making your board stiffer and eliminating distortions. They furthermore ready your board to carry a hydrofoil.

## Biaxial Carbon

Ultra Light & Ultra Strong  
Heel Shocks

Generous patches of biaxial carbon sandwich shock absorbers under your heels.

## Single Glass

Very Light & Very Strong  
Direct Drive Monocoque™

The Direct Drive Monocoque connects your stance to the masttrack and distributes peak loads to the rest of the board, allowing for our boards to be both lighter and more rigid than traditional race board constructions.

## Biaxial Glass

### Very Light & Super Strong Race Rail Shocks

Extensive rail strips of wide biaxial carbon and glass on top of large wood sandwich shock absorbers under your heels. Extending from behind the back inserts to in front of the the front inserts. Made to support an aggressive race stance on the outer rail.

## HYPER SKIN HD

Technology

### High Density Sandwich Hyper Light & Hyper Strong 360° Board Coverage

Hyper Skin HD is our proprietary closed cell sandwich, delivering an immensely rigid structure at an extremely light weight. Covering deck, rails and bottom in it, gives our Pro boards their incomparable flex and longevity. A third stronger, stiffer and lighter than conventional boards.

# Carrera **PRO**

Freecurve Single

Carrera Pro 130 by Bjoern

# Volar

PRO

Freeride Single

Marino by Paul

**The Volar Pro is our ultimate Windsurfing board, to grow, learn and enjoy the sport on all levels.**

The board is fast, stable and accelerates with each gust of wind. On a straight line or jibing, the Volar Pro rides naturally, giving the rider all the confidence to push their level at every move.

# Volar **PRO**

Freeride Single

**With its thinner profile,  
on the water or in the air  
the new Volar Pro  
feels like an extension  
of your body.**

Each shape was individually created to match specific conditions, giving the larger volumes a proportionally wider outline, more balance and early planing needed in lighter conditions, while the smaller sizes feature an increased bottom curve and easy control demanded on those rougher days.

On top, you can seriously alter the character of these boards by simply adjusting the straps further inboard or outboard, using single double straps in its three levels of strap options.

Volar Pro 130 by Bjoern

# Volar

Freeride Single

Vickey by Paul

The new Volar makes the same shape and concept as the Volar Pro available in a more rugged and affordable build, ideal for schools, centers and families, while offering identical ride characteristics. A durable, tough, but still light all-around windsurfing board.

The Volar features unidirectional glass reinforced rails for extra stiffness in surf conditions. High grade epoxy resin creates an impact resistant outer skin. All other features and inserts match the Pro version.

# Pure

## Freeride.

Considerably more affordable than the Volar Pro, by using a wood sandwich build around its fused cell foam core, the Volar guarantees supreme durability, making it a favorite with windsurfing centers around the world.

# Surf

Trainer Single

## The Surf encompasses a comprehensive line of beginner and school boards, covering all needs in seven sizes.

The Surf is a board that will get you through your first days, and that you will keep coming back to, even after you have mastered all the basics.

The Surf guarantees anyone a fun and fast entry into the windsurfing world. The 160, 200, 220 and 260 feature a fully retractable Allgaier® dagger board for maximized stability, while the smaller 115, 130 and 145 sizes feature a regular center fin instead, for advanced learning. The Surf covers a full beginner board range and the 260 is among the biggest beginner boards on the market. This entry level board is crafted to school requirements and your family's needs alike.

The Surf features an extra thick full EVA deck, keeping your knees and your board in healthy shape for many seasons. Its bigger sizes feature EVA rails, while the smaller sizes come with clear rails. All sizes come with an integrated nose protector.

All sizes furthermore feature a color coded deck graphic layout, with dedicated pad grooving and EVA density zones tailored to multiple levels of rider skill. The darker gray zone being your up-haul and early stages stance, and the grooved white pad zone representing your advanced stance and entry strap area. Green and red dots indicate starboard and port for communication.

The Surf comes with multiple straps, an integrated nose handle and an additional tail handle.

A base insert in the nose allows you to attach a tandem rig for kids and is available on the 200, 220 and 260.

Surf 130 by Bjoern

Texture coded full-pad deck with designated zones for uphauling and advanced levels.

This new range is all about lightness and weigh distribution, new materials, new features, new designs, new colors.

Please find all specs at the end of the catalog.

Guru X Pro by Bjoern

# Light & Strong. Silky & Smooth. By Jason.

Our focus is on making the lightest handling sails, meeting the requirements of our most demanding riders, and discerning customers.

Goya Windsurfing sails fly in the hands, feeling silky and smooth across a huge range of use, due to superbly refined weight distribution.

Made to perform in the elements, all of our sails have been engineered to deliver drive, flexibility and lightness paired with durability that you can count on.

All of our wave sails now come with Bi-Ply or X-Ply windows for extra longevity. Made in the USA. Like all our films. Now with Dual Pass Lamination and UV Inhibitor. The strongest and longest lasting materials we ever came across.

The 2020 sail models follow a progressive construction concept, Freestyle being the ultimate lightest, Freerace and Freeride being super light, but also built to withstand the stress of performance speed sailing, and Wave bringing along the lightness and durability demanded by a sail that sees stormy lakes and rivers, just as it does hollow reef breaks and treacherous shore break. You need both qualities, strength and lightness, bamboo and feather.

# Banzai **PRO**

Powerwave 4 Batten

The go-to worldwide wave sail for our top riders Marcilio Browne (PWA 2013 wave world champion & 2019 vice wave world champion) and Marino Gil Gherardi (PWA 2018 & 2019 youth wave world champion).

The Banzai Pro is the answer and solution to all demands of a light weight, direct power delivery, wide range sail with heaps of flex feel and control. The adaptability of the Banzai Pro is unparalleled.

Unique to the Banzai Pro design concept is the back-hand throttle control. The sail pulls forward from "low RPMs" and is very balanced, but there is always a little "extra" available off the back hand for when you really need to juice up into a jump or maneuver. This tactile back-hand feel gives you a direct connection to how the sail is loading and releasing and allows you stay connected throughout your maneuvers. The Banzai Pro window material is Bi-Ply film. A massive step up from mono film, Bi-Ply is two layers of laminated clear film, lasting about 3x longer than mono film. It is UV protected and highly resistant to hard creases. Endlessly supple when unrolling your sail, and endlessly valuable when falling and not breaking it.

**BPF**  
Bi-Ply Film. Made in the USA.

Banzai Pro 4.2 by Bjoern

# Banzai X PRO

Powerwave 4 Batten

Kai by Paul

# The Banzai X Pro is the go-to 4 batten worldwide wave sail for our top riders Levi Siver and Kai Lenny in the Pacific Ocean and Loick Lesauvage in the Mediterranean Sea.

The Banzai X Pro has the same quality window film as the regular Banzai Pro, equally UV protected and highly resistant to hard creases, with the addition of ultra strong Spectra yarns for added tear resistance in the rare occasion you pinch its outstanding base film.

The Banzai X Pro, again, is the answer and solution to all demands of a light weight, direct power delivery, wide range sail with heaps of flex feel and control. The adaptability of the Banzai X Pro is unparalleled.

Unique to the Banzai X Pro design concept is the back-hand throttle control. The sail pulls forward from "low RPMs" and is very balanced, but there is always a little "extra" available off the back hand for when you really need to juice up into a jump or maneuver. This tactile back-hand feel gives you a direct connection to how the sail is loading and releasing and allows you stay connected throughout your maneuvers.

Marcilio Browne has driven this concept for both the Banzai Pro and the Banzai X Pro, insisting that the sails maintain the connected feel, providing supreme confidence and control through technical and radical maneuvers. There is a trend in the market for more "neutral" feeling wave sails, and while there is a place for more of that on other Goya models, the Banzai Pro is designed for a more positive rider connection to instant power delivery.

Surfwave 3 Batten

Levi by Paul

# Fringe X PRO

Surfwave 3 Batten

Featuring the same quality window film as the Fringe Pro, with the addition of ultra-strong Spectra yarns for added tear resistance. An entire window area full wide spaced X-Ply.

The Fringe X Pro is the most lightweight, smooth power delivering and effortless handling sail in the Goya wave range, and this is why it is Levi Siver's top pick.

The ultra-light weight fingertip handling feel combined with the huge window make the Fringe Pro feel like pure surfing, with a power assist. The "Direct Connect" foot batten back end to clew configuration really adds to the precise feel and handling of this maneuver wave sail. Easy power and finesse with a fingertip. Golden touch really describes the feeling of Fringe Pro in the surf.

But there's much more than just wave performance that the Fringe Pro brings to the table. With the biggest size range of any model, 2.8 all the way up to 6.3, the Fringe X Pro is an equally perfect choice for smaller riders seeking a lighter weight, easy handling rig feel, for training and light air cruising, for easy and effortless Freeride sailing, and also for foil windsurfing where the power to weight ratio is so important for creating lift in the lightest of winds.

**XPF**  
X-Ply Film. Made in the USA.

Fringe X 4.5 by Bjoern

Fringe X 4.5 by Bjoern

# Guru X **PRO**

Controlwave 4 Batten

Vinyl creates a very smooth power delivery, as well as the most durable sail in our lineup.

It is practically indestructible and will stay crystal clear for the life of the sail. The new Guru X Pro is the result of 25 years of design evolution and the process and progress continues.

**XPR**

Guru X Pro 4.5 by Bjoern

# Bounce

PRO

Freestyle 4 Batten

Jay by Paul

Jay by Paul

# Bounce PRO

Freestyle 4 Batten

In just one word, pop. Massive lift and ease of rotation drive progressive freestyle maneuvers. And they also drive the Bounce Pro, project baby and sail of choice for our freestyle team riders Antoine Albert, Yarden Meir, Jay Lee and Rob Warwick.

Feather light weight alongside the perimeter durability required in a technical freestyle sail. To make the lightest sail period, you have to shave off weight wherever possible, and the Bounce Pro offers the perfect platform to push this idea to the forward.

Ultra lightweight body panels in Monofilm, Bi-Ply and Scrim, minimized components, dedicated "lifting" draft profile, silky quiet rotation, all these details contribute to the feeling of lightness, lift and levitation of its pure freestyle design.

The new Bounce Pro features refined outlines with shorter boom lengths on sizes 3.8, 4.2, 4.4 and 4.8. This makes rotational and duck tricks easier. More shape forward and higher in the profile give more lift and pop. Refined foot batten shapes ease batten rotation and enhance the lifting nature of the sail.

Bounce Pro 4.8 by Bjoern

# Mark 2 PRO

Freerace 6 Batten, 2 Cam

Marcilio by Paul

# Mark 2 PRO

Freerace 6 Batten, 2 Cam

## Performance Freerace.

A combination of excellent top-end speed, performance oriented bottom-end power, superior control and stability.

Mark 2 Pro offers white knuckle cam sail speed and cam sail stability without needing to rig "oversized". You can enjoy the blistering speed and range of the sail without feeling like you are wrestling a dinosaur. Mark 2 Pro is

best rigged in range, meaning not oversized. The design is cut to be super powerful, with the idea being to ride this sail as small as you can for the board you have. This means your sail is easier to handle because it's smaller, there is greater efficiency overall and also less energy spent handling through maneuvers and transitions. The Mark 2 Pro is highly interactive, it can set a line and blaze, but it also likes quick changes of direction, upwind, deep off the wind, speed lines and carving turns. A high-performance sail based on flat out racing designs and specifically developed to perform on Hydrofoil and Slalom boards alike. Designed with real world racing and foiling in mind, it pairs best with the Proton Pro.

RDM or SDM compatible on all sizes, except 5.4, 5.8.

RDM or SDM

Mark 2 Pro 6.6 by Bjoern

# Mark PRO

Freerace 6 Batten, No Cam

Bjoern by Paul

Jackson by Paul

# Mark **PRO**

Freerace 6 Batten, No Cam

## No Cam Freerace.

**Racing speed made simple. The Mark Pro is quick to rig and easy to tune.**

Delivering impressive low end torque and acceleration combined with easy handling when super powered, the Mark Pro allows you to focus on your line and tactics rather than managing your sail. Super lightweight 6 batten build plus truncated boom length give the Mark Pro a compact, light and easy feeling as you accelerate, when you are powered up at speed and through high speed technical transitions around the buoy.

The Mark Pro is best paired with a fast Freerace board, such as the Bolt Pro, or a dedicated slalom/race board, such as the Proton Pro.

The secret to the Mark Pro's great feeling is in the heart of the sail, the profile, twist and release. A little more shape forward, a smooth transition, and a smooth and clean release, particularly in the leech area just above the boom. The Mark Pro has a more neutral feel when powered up, and when the big gust hits, it stays settled.

RDM or SDM compatible on all sizes, except 5.4, 5.8.

RDM or SDM

Mark Pro 5.8 by Bjoern

Freeride 5 Batten

Jay by Paul

# Nexus **PRO**

Freeride 5 Batten

**An all-around masterpiece, the Nexus Pro is RDM or SDM compatible\* and puts its number one priority on pure and simple fun.**

**It is the best sail choice for power, speed and maneuvers in conditions ranging from flat water to bump and jump, and a touch of surf.**

The heart and soul of freeride windsurfing is realized in the Nexus Pro. Excellent low-end power, stability and easy control, blazing speed, big jumps and hard carving maneuvers, the Nexus Pro will deliver beautifully on all of the above. The light, easy handling of the Nexus Pro makes light wind sailing more fun and also makes powered up sailing more comfortable. Smaller sizes of the Nexus Pro are now cut with higher foots for tight maneuvering, and larger sizes are cut more for low-end power and speed. The Nexus Pro transforms to suit the conditions. Built to last, it features our all of our finest construction details for a long life in real world conditions.

The Nexus Pro continues to be a tester and customer favorite year in and year out, and the 2020 design continues to push the core concept of pure fun, performance and quality in a fun, freeride design.

Scion X Pro 2.75 by Bjoern

# Scion

**Super light weight, very durable, easy handling, the new Scion X Pro is a premium performance wave sail, targeting kids as well as small or light riders under 45 kilos.**

Modeled after the highly successful Fringe X Pro concept, the Scion X Pro delivers all the key features of a top level wave sail, great low end power, stability and easy handling.

Learning to plane, jump, surf, loop, this is a performance wave sail for kids with no limitations.

New for 2020 is the addition of sizes 2.25 and 2.75, this gives more choices for kids pushing their performance in this critical high wind range.

**PRO**

# Surf

Trainer 1 to 3 Batten

**The Surf is a super light handling and soft feeling beginner sail for newbie windsurfers and schools.**

Vinyl and Dacron create a very durable trainer sail that can be left rigged for extended periods. Its bright red color is easy to spot both from the shore and across the water.

Soft, playful, easy and incredibly durable, the Surf is the perfect beginner sail, or an excellent sail for just cruising on a big board in light wind.

We constantly keep improving and developing the Surf to cater directly to centers' and customers' needs.

Wide Tail End, Carbon Skinny Pro by Bjoern

New 1 Year Warranty

## Hundred Pro RDM

Reduced Diameter Mast

100% Carbon. Made in Italy. The Hundred Pro mast is designed from the highest grade carbon available, period. Don't mistake it for helium though, it's just carbon, nothing but carbon.

Designed for Freestyle, Race, Freeride and Freecarve, this flatwater mast has the fastest reflex response of all Goya Windsurfing masts, giving enormous amounts of acceleration to any sail you rig on it. Especially the Bounce Pro Freestyle sail comes to life like no other on this mast. The 99% is your choice if you are looking for unsurpassable performance period. Precision engineered. It's center of gravity is beautifully low and its weight is among the lightest on the market.

With that comes an obvious amount of delicacy, hence we recommend you do not take this mast into the waves and advise you to take special care when rigging in rough terrain.

Available in 340, 370, 400, 430 centimeters.

Comes in Diagonal Flex™ technology.  
Peel Ply anti-slip boom area prevents sliding.  
Built with same length sections for easy handling.

New 1 Year Warranty

## Hundred Pro SDM

Standard Diameter Mast

100% Carbon. The premium Race and performance oriented Freeride mast. This is your go-to mast when speed and lightweight are your top priority.

The Hundred Pro is a no-compromise product, built for racing, developed by racers. No doubt this mast works just as beautifully on Freeride sails but where it shines is when being paired with the Mark Pro or Mark 2 Pro. The purpose of SDM masts being to create stiffness with larger diameter rather than increased wall thickness, you get the same bend with less weight in SDM.

Pairing Diagonal Flex™ technology with an all carbon SDM mast is just about as perfect as it gets, but again, this is not the most rugged mast in our line, you have to treat it with a little tender loving care, and it is not intended for use in waves. Follow those simple rules and your rewards will be extraordinary.

Available in 430, 460, 490 centimeters.

Comes in Diagonal Flex™ technology.

New 2 Year Warranty

## Ninety Pro RDM

Reduced Diameter Mast

90% Carbon. Made in the USA. Our workhorse. This is the mast that Marcilio, Levi, Kai and the team rely on at Hookipa, Jaws and other waves of consequence.

At 90% carbon this mast delivers the ultimate weight to strength ratio. It's light enough for any given rider, day and conditions, but it can take a beatings like no other mast on the market. To make it short, the Ninety Pro by Goya Windsurfing offers ultra superb durability and the perfect rig feeling. Quality and consistency are the hallmarks of the Ninety Pro mast design.

If you need to get one mast to do it all, and handle it all, this is your pick. It's what most of our team riders do, and it's the mast most people get when they buy a Goya wave sail. For a very good reason.

Tops and bottoms are interchangeable for flex customizing.

Available in 310, 340, 370, 400, 430, 460, 490 centimeters.

Comes in Diagonal Flex™ technology.  
Peel Ply anti-slip boom area prevents sliding.  
Built with same length sections for easy handling.

New 1 Year Warranty

## Eightyfive Pro RDM

Reduced Diameter Mast

85% Carbon. This is a super light and super quick mast with an incredibly nice feeling. A mere split second softer than our Ninety Pro, and lighter, it is bound to be an instant best seller, worldwide.

85% carbon is the highest carbon content allowed in some key magazine tests, and we are confident it will excel in every single one. What's so attractive about the Eightyfive Pro is its lighter weight compared to the Ninety Pro. Less durable though? Virtually not. So if you're not sailing double mast high sets or doing double forwards, this just might be your dream mast.

It's Diagonal Flex™ that allows the Eightyfive Pro to both bend to amazing curves twist extremely lively while in such contortions. Working in direct synergy with Goya Windsurfing sail design.

Available in 310, 340, 370, 400, 430, 460, 490 centimeters.

Comes in Diagonal Flex™ technology.  
Peel Ply anti-slip boom area prevents sliding.  
Built with same length sections for easy handling.

New 1 Year Warranty

# Seventy RDM

Reduced Diameter Mast

70% Carbon. Value that's a cut above. This mast delivers outstanding performance and durability at an affordable price. Having three years of heritage, the Seventy has proven itself well worthy to be part of the Goya brand legacy.

Simply because 70% carbon is less than 90 % carbon doesn't mean our more affordable masts come with any less quality control. We ensure that each Goya masts lives up to the very expectation we have established and delivered over the years.

Available in 310, 340, 370, 400, 430, 460, 490 centimeters.

Peel Ply anti-slip boom area prevents sliding. Built with same length sections for easy handling.

New 1 Year Warranty

# Seventy SDM

Standard Diameter Mast

70% Carbon. A wonderful Freerace and Freeride mast. Rewarding performance and true value.

The Seventy is a great line of all-around masts in that they come in both RDM and SDM diameters. If you prefer SDM, this mast is for you. The purpose of SDM masts being to create stiffness with larger diameter rather than increased wall thickness, you get the same bend with less weight in SDM.

Especially casual flatwater riders will hence enjoy this popular mast offering good response and a light feel. Excellent performance and beautiful fit and finish combined to create true value.

When you ride this mast you can be at ease that it has undergone the same quality control standards that every other Goya product has to live up to. You ride what we ride. And we like our gear to deliver and last.

Available in 430, 460, 490 centimeters.

New 1 Year Warranty

# Fifty RDM

Reduced Diameter Mast

50% Carbon. The recreational Goya mast. The best value Goya mast.

This mast is a pretty amazing blend of affordability and great quality. Definitely recommended for the most recreational of conditions, up-hauling, learning the basics of windsurfing, beginning water starting, planing, learning to get into the straps and harness, cruising.

The Fifty has all the same bend and stiffness numbers as the rest of the Goya mast range, but it goes a bit alongside the Surf Trainer mast, it's good for beginners, and will work well in to the fully powered/full planing range of flat water windsurfing.

If affordability is a factor for you, this is your mast. The opportunity to experience the feel of a Goya rig with matching components. Designed and built to get people going on the water, for the love of our sport.

Available in 340, 370, 400, 430 centimeters.

Built with same length sections for easy handling.

New 1 Year Warranty

# Surf RDM

Reduced Diameter Mast

100% Glass & Epoxy. The Surf mast is the obvious choice to go with the Surf sail as well as the Scion sail, tying a neat package that works in simple synergy.

These glass & epoxy masts have been designed to work perfectly on the Surf and the Scion. While their construction is similar to our full size mast, their layup is simplified, while still ensuring the kind of strong and light product you expect from Goya.

With the Surf mast line we're offering you a wonderful solution to that long mast top sticking out of your kid's sail. This reduces swing weight, uphaul weight and carrying weight. It also makes the sail perform and look better.

We believe that quality matters from day one. The motivation that comes from easy and supportive gear is irreplaceable, especially for kids lacking our physical strength.

Available in 190, 220, 265, 295, 325, 355, 370, 400, 430 centimeters.

Built with same length sections for easy handling.

New

1 Year Warranty

## Carbon Skinny Pro MDB

Minimal Diameter Boom

Our top of the line ergonomic performance boom.

The Carbon Skinny Pro comes as a 100% prepreg carbon monocoque body and extension. Its 24.5 mm grip takes diameter reduction one step further. Comfort. Control. It's hard to get the team on anything else these days.

## New with a wider tail end & stiffer tubes.

This boom is about as stiff and strong as you can get in the market, nay in carbon technology at large. Double pin locking guarantees a firm fit and ample load distribution between the boom body and the boom extension. This boom is a no compromise high performance product and features modern wide and stiff tail ends. Built with 33msi pre-preg carbon.

Available in 180, 190, 200 centimeters.

Adaptor allows use with RDM and SDM masts.

Lighter

New optimized lay-up.

New

1 Year Warranty

## Carbon Pro / Carbon RDB

Reduced Diameter Boom

Our workhorse carbon boom now comes in two builds.

The Carbon Pro features the same 100% prepreg carbon monocoque body & extension as the Carbon Skinny Pro.

The Carbon features a 60% prepreg carbon monocoque body & extension. Same great feel. Better for the budget.

The grip on both builds is in line with what most riders consider comfy these days, slimmer than standard booms. Smaller sizes are 27.5 mm, larger models are 30 mm.

Comes with the proven double pin locking system. With four sizes, this boom spans a great range of sails and has been a favorite with a vast number of riders for a long time. Both builds come with wide and stiff tail ends, and lengths of up to 250 cm.

Carbon Pro available in 190, 210, 240, 250 centimeters.

Carbon available in 190, 210, 240 centimeters.

Adaptor allows use with RDM and SDM masts.

Lighter

New optimized lay-up.

1 Year Warranty

## Aluminum RDB

Reduced Diameter Boom

Prime performance is being delivered by these reduced diameter T6 aluminum booms. On a budget but craving peak performance? Look no further!

These booms feature a one-piece build structurally identical to our carbon booms. They in fact rival a number of other carbon booms on the market. High stiffness and strength are provided even when fully extended.

The grip of the Aluminum is reduced, making riding this boom a pleasurable experience even if you're in the water for hours. Smaller sizes measure 27.1 mm, larger models transition from 26 into 29.5 mm towards the tail.

Our Alu boom comes with the Goya double pin locking system and features a highly robust front end. Contest winning technology at an affordable price. The Aluminum comes with wide and stiff tail ends.

Available in 160, 180, 190, 200, 220, 230, 250 centimeters.

Adaptor allows use with RDM and SDM masts.

1 Year Warranty

## Surf RDB

Reduced Diameter Boom

A boom is in fact one of the most important pieces of windsurfing gear. It's what you hold in your hands. It's what your kids hold in their hands.

We kept this in mind while designing the Surf boom, made from T6 aluminum. The Surf is what we want our own kids to go sailing on. It's light and won't let your kid down, neither in fun situations nor in challenging ones.

At 25.7 mm it comes with a grip designed for kids hands, perfect for small steps and big dreams. The Surf boom is literally a scaled down version of our full size aluminum booms, offering prime quality for your little ones.

Available in 87, 150, 170 centimeters.

New

1 Year Warranty

## Extension Pro RDM or SDM (both available)

Graceful and rigid. Goya carbon extensions are lighter and stiffer to accept high loads especially on longer extension settings and large sails.

All Goya extensions use the super strong pin and collar system and come with a proven stainless steel power pulley and cleat.

## New with thicker walls & alternating hole layout. (RDM version)

These extensions offer the best weight to stiffness ratio, light and incredibly strong. Optimal block-to-block geometry and reduced friction are provided by aligning the pulleys of Goya sails to the pulleys of Goya extensions. All Goya extensions come as Universal Pin (Euro) models, designed to be compact and sleek.

Available in RDM 30, 40 centimeters.

Available in SDM 30, 40 centimeters.

PRO

1 Year Warranty

## Extension RDM or SDM (both available)

The economic alternative. Same features, same strength, in a more affordable package using quality T8 aluminum.

Our aluminum extensions use the same pin and collar system, stainless steel power pulley system and cleat as our carbon extensions. The identical stepped hole layout comes into play, making these about the most rigid aluminum extensions on the market.

Optimal block-to-block geometry and reduced friction is again provided by aligning the pulleys of these Goya extensions sails to the pulleys of all Goya. All aluminum extensions are Universal Pin (Euro) models.

Available in RDM 30 centimeters

Available in SDM 30 centimeters.

1 Year Warranty

## Surf RDM & SDM (one fits both)

This straight forward and simple zero-extension is designed to be used with Goya Surf masts in combination with adjustable sail tops.

The Goya Surf extension presents the easiest way to achieve the zero position of your recommended sail specs in combination with a Goya Surf mast. This is a no frills design paired with a sturdy low-friction pulley system. Its soft rounded shape guarantees your kids won't bruise their feet when learning new moves, dancing around the mast.

RDM masts fit inside the extension, while SDM masts fit outside.

Available in RDM & SDM 0 centimeters.

1 Year Warranty

## Base Pro Universal Mast Foot

The Goya Base is a One Size Fits All system using a urethane tendon. It screws into any standard fin-box type mast-track.

Used by most professional sailors this base attaches all your Goya boards to all your Goya rigs. The release system is Universal Pin. Its low height and wide base plate distribute the forces of the sail evenly onto the board deck, while a padded layer absorbs shocks and protects the deck of your board.

Available in One Size Fits All.

## Hundred Pro RDM

Length <small>CM</small>	Diameter	IMCS	Carbon	Bottom Bend	Top Bend	Tech	Weight <small>KG</small>	Color
340	RDM	14	100%	65%	78%	Prepreg Carbon	0.92	White
370	RDM	16	100%	64.5%	79%	Prepreg Carbon	1.15	White
400	RDM	18	100%	64.5%	79%	Prepreg Carbon	1.37	White
430	RDM	21	100%	64%	78%	Prepreg Carbon	1.65	White
460	RDM	21	100%	64%	77%	Prepreg Carbon	1.78	White

## Hundred Pro SDM

Length <small>CM</small>	Diameter	IMCS	Carbon	Bottom Bend	Top Bend	Tech	Weight <small>KG</small>	Color
430	SDM	21	100%	63%	77%	Prepreg Carbon	1.58	White
460	SDM	26	100%	63%	77%	Prepreg Carbon	1.87	White
490	SDM	30	100%	63%	77%	Prepreg Carbon	2.06	White

## Ninety Pro RDM

Length <small>CM</small>	Diameter	IMCS	Carbon	Bottom Bend	Top Bend	Tech	Weight <small>KG</small>	Color
310	RDM	12	90%	65%	76%	Prepreg Carbon	1.3	Pastel Yellow
340	RDM	14	90%	65%	78%	Prepreg Carbon	1.55	Pastel Yellow
370	RDM	16	90%	64.5%	79%	Prepreg Carbon	1.65	Pastel Yellow
400	RDM	18	90%	64.5%	79%	Prepreg Carbon	1.8	Pastel Yellow
430	RDM	21	90%	64%	78%	Prepreg Carbon	2.09	Pastel Yellow
460	RDM	26	90%	64%	77%	Prepreg Carbon	2.25	Pastel Yellow
490	RDM	30	90%	64%	77%	Prepreg Carbon	2.2	Pastel Yellow

## Eightyfive Pro RDM

Length <small>CM</small>	Diameter	IMCS	Carbon	Bottom Bend	Top Bend	Tech	Weight <small>KG</small>	Color
310	RDM	12	85%	65%	76%	Prepreg Carbon	0.85	Pastel Salmon
340	RDM	14	85%	65%	78%	Prepreg Carbon	1.14	Pastel Salmon
370	RDM	16	85%	64.5%	79%	Prepreg Carbon	1.25	Pastel Salmon
400	RDM	18	85%	64.5%	79%	Prepreg Carbon	1.5	Pastel Salmon
430	RDM	21	85%	64%	78%	Prepreg Carbon	1.94	Pastel Salmon
460	RDM	26	85%	64%	77%	Prepreg Carbon	2.18	Pastel Salmon
490	RDM	30	85%	64%	77%	Prepreg Carbon	2.39	Pastel Salmon

## Seventy RDM

Length <small>CM</small>	Diameter	IMCS	Carbon	Bottom Bend	Top Bend	Tech	Weight <small>KG</small>	Color
310	RDM	12	70%	65%	76%	Prepreg Carbon	0.94	Pastel Rose
340	RDM	14	70%	65%	78%	Prepreg Carbon	1.20	Pastel Rose
370	RDM	16	70%	64.5%	79%	Prepreg Carbon	1.40	Pastel Rose
400	RDM	18	70%	64.5%	79%	Prepreg Carbon	1.54	Pastel Rose
430	RDM	21	70%	64%	78%	Prepreg Carbon	2.03	Pastel Rose
460	RDM	26	70%	64%	77%	Prepreg Carbon	2.25	Pastel Rose
490	RDM	30	70%	64%	77%	Prepreg Carbon	2.66	Pastel Rose

## Seventy SDM

Length <small>CM</small>	Diameter	IMCS	Carbon	Bottom Bend	Top Bend	Tech	Weight <small>KG</small>	Color
430	SDM	21	70%	64%	78%	Prepreg Carbon	1.99	Pastel Rose
460	SDM	26	70%	64%	77%	Prepreg Carbon	2.12	Pastel Rose
490	SDM	30	70%	64%	77%	Prepreg Carbon	2.35	Pastel Rose
